

## REVIEW QUESTIONS LESSON 11

- Which of the following can be considered an agricultural confined space?
  - Grain bin
  - Manure storage facilities
  - Grain transport vehicle (GTVs)
  - All of the above
- A simple definition of a confined space is it:
  - has only one entry/exit point
  - is at least 20 feet off the ground
  - takes both hands to get in and out of the space
  - is below ground
- A hazard associated with a confined space is:
  - Suffocation
  - Entrapment
  - Asphyxiation
  - All of the above
- The deadliest gas found in a silo shortly after filling the silo is:
  - Carbon dioxide
  - Carbon monoxide
  - Hydrogen Sulfide
  - Nitrogen dioxide
- If you must enter a silo within 14 to 21 days after filling the silo, the best thing you can do is:
  - Run the silo unloader to remove the top several inches of silage
  - Run the silage blower to ventilate the silo
  - Nothing, as it is safe to enter the silo
  - None of the above are acceptable practices
- The deadliest gas found in manure pit is:
  - Carbon dioxide
  - Ammonia
  - Hydrogen sulfide
  - Methane
- Manure as it decomposes produces deadly gases which can reduce the oxygen levels below the acceptable level of \_\_\_\_ percent needed to sustain life.
  - 59
  - 79
  - 39
  - 19
- Most farm/ranches are exempt from OSHA compliance if they employ \_\_\_\_ or fewer workers
  - 10
  - 15
  - 20
  - 25
- As a young and beginning worker you have the right to:
  - Refuse to perform tasks that you are not trained or equipped to perform safely – without retaliation
  - Receive information and training about the hazards you are exposed to in the workplace
  - Have access to and training regarding emergency action plans
  - All of the above
- For a first responder to safely enter a manure pit they must wear a:
  - N-95 respirator
  - Dust mask
  - Self-contained breathing apparatus (SCBA)
  - Rubber gloves
